What is the Future Ready Action Plan?

As part of the Guelph Transit Business Service Review (2019), it was recommended that a holistic route review be conducted, looking at wholesale system changes and individual route modifications. This review also provides background for the future Guelph Transit Master Plan to 2040.

The route review analyzed the optimal route network and schedule design for the short- and long-term using industry best practices within the local context to ensure the transit system can meet the needs of Guelph. This resulted in the Guelph Transit Future Ready Action Plan.
The vision

To create a competitive, convenient and reliable transit network that meets the needs of today’s and tomorrow’s customers.
What information and policies were reviewed?

- City’s Strategic Plan, 2019-2023
- Guelph Transportation Master Plan (in progress)
- Development Charges Background Study Technical Appendix (2018)
- MTO’s Transit Supportive Guidelines
- Pre-pandemic and current ridership and stop activity data
- On-time performance by route
- Survey of riders and residents conducted in 2020
Community Engagement

Two phases of public engagement were conducted. Phase 1 engagement focused on hearing what the public believes is and is not working with the current network and what would encourage them to use transit more often.

Phase 2 engagement brought preliminary recommendations, based on data analysis and initial public feedback, to stakeholders for review and input. Stakeholders were asked what they liked and did not like about the recommendations and if any other considerations should be made.
Community Engagement Results

Through Phase 1 engagement, it was determined the priorities for the route network should be to provide:

- More routes that take people where they need to go
- Quicker travel times
- Frequent service
- More service reliability

It was also determined that many routes struggle to stay on time, and a combination of service types is most effective for Guelph. Crosstown routes, transit priority measures such as signal priority, and managing overloads were commonly mentioned by respondents.
Community Engagement Results

Based on the feedback received in Phase 2 engagement, the proposed network was reassessed and refined to better meet the needs of the public and address areas of concern.

The changes made included:

• Modifying route designs for better coverage
• Adding new university express route coverage
• Providing new on-demand stops
• Increasing frequency
• Providing longer Sunday service hours
Consistency through service standards

Before developing the network, a set of service standards were created. They were updated and consolidated from numerous documents, such as the Official Plan, Service Review, and Transit Growth Strategy from 2010.

They focus on the four guidelines of: Service Design Standards, Service Level Targets, Service Expansion Targets, and Service Review Standards. These four guidelines are important because they guide the overall intention of the network and ensure a consistent approach is made to reviewing and adjusting the network as the City grows.

The service standards are outlined in detail in the following section.
Service Design Standards

Service Design Standards define service coverage (maximum walking distances), route categorization as part of a family of services, minimum frequencies and span of service, stop spacing and placement, and bus stop amenity prioritization (shelters, benches, concrete pads, etc.).

<table>
<thead>
<tr>
<th>Service Coverage</th>
<th>The targeted service coverage is 90% of people and jobs within 400 metres of a bus stops.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Bus Stop Spacing</td>
<td>Base routes will have bus stops placed an average distance of 250 metres apart along the route, with spacing no less than 150 metres.</td>
</tr>
</tbody>
</table>
| Bus Stop Placement | New bus stops will not be placed in front of front-lotted homes  
Where there is a high volume of right-turning vehicles and/or frequent bus service (better than 20-minutes), bus stops should be placed farside of the intersection whenever possible.  
Bus stops will be placed in locations with sufficient right-of-way to install stop amenities (shelters, benches) whenever possible. |
### Bus Stop Amenity Prioritization

When allocating funds for new bus stop amenities (i.e. shelters, concrete pads, etc.), the below criteria will be used in the following order to prioritize locations for these improvements:

<table>
<thead>
<tr>
<th>Criteria</th>
</tr>
</thead>
<tbody>
<tr>
<td>1. There is currently not a pad or shelter</td>
</tr>
<tr>
<td>2. There is a sidewalk and curb</td>
</tr>
<tr>
<td>3. There is sufficient space in the right-of-way to install the amenity</td>
</tr>
<tr>
<td>4. Stops with higher passenger boardings</td>
</tr>
<tr>
<td>5. There is an accessibility concern or accessibility request at the stop location</td>
</tr>
</tbody>
</table>
| 6. When considering a shelter at a stop, in addition to the above, it should meet one or more of the following criteria:  
  • There is an average minimum of 20 boardings per weekday  
  • There are poor microclimate conditions such as wind tunnels or a lack of other shelter sources  
  • The stop is located near a key community location |
<p>| 7. When considering a bench at a stop, in addition to criteria 1 to 5, it should have an average minimum of 10 boardings per weekday |
| 8. There is already a pad poured to accommodate a shelter |
| 9. The existing amenity is in poor condition |
| 10. There has been a public request for an amenity |</p>
<table>
<thead>
<tr>
<th>Family of Services</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Base Routes</strong></td>
</tr>
</tbody>
</table>
| Base routes provide localized services, typically beginning and/or ending at a hub location. Guelph Transit’s base network will:  
  • Provide service 7 days a week, year-round  
  • Provide all-day service, generally within the standard service hours of 5:45 a.m. to 12:15 a.m. Monday to Saturday and 9:15 a.m. to 6:45 p.m Sundays and Holidays  
  • Operate a minimum of every 30 minutes from the start of service to 10:00 p.m. |
| **Core Routes**    |
| Core routes provide major connections across town along major corridors, with the goal of having more frequent service on these key corridors. Guelph Transit’s core network will:  
  • Provide service 7 days a week, year-round  
  • Provide all-day service, generally within the standard service hours of 5:45 a.m. to 12:15 a.m. Monday to Saturday and 7:15 a.m. to 10:15 p.m Sundays and Holidays  
  • Operate a minimum of every 30 minutes from the start of service to 10:00 p.m., with the goal of providing more frequent service wherever possible |
| **Community Routes** |
| Community routes provide service in areas with low demand and/or new growth areas that have not yet achieved transit-supportive densities. Guelph Transit’s Community network will:  
  • Offer on-demand and/or limited service in areas without access to other transit routes or to key community locations  
  • Hours and frequency will be based on demand |
| **University Routes** |
| University Routes provide direct service from student housing location to the University Centre. Guelph Transit’s University network will:  
  • Provide service on weekdays from September to May  
  • Provide service and frequency based on demand  
  • Some sections of the routes may operate as an express where there is duplication of service |
| **Industrial Express Routes** |
| Industrial Express Routes provide additional service to employment areas. The design of this service will be developed through partnerships with employers in Guelph that wish to offer more service to their employees. |
Service Level Targets

Service level targets define when service should be modified through increased or decreased frequency, increased or decreased service hours, and modifying schedules through the analysis of passenger loads and on-time performance.

### Passenger Loads

Load Factor is the proportion of a vehicle’s seated capacity occupied by passengers, expressed as a percentage. A load factor of 100% indicates all seats are occupied with no standees. A load factor less than 100% indicates there are unoccupied seats in a vehicle. A load factor greater than 100% indicates all seats are occupied and there are standees. A Guelph Transit vehicle has a seated capacity of 45.

The next feasible board period is defined as the period when all requirements of the Union Collective Agreement can be met and resources are made available.

<table>
<thead>
<tr>
<th>Peak Periods</th>
<th>Off-Peak Periods</th>
</tr>
</thead>
<tbody>
<tr>
<td>Where the load factor is 150% or greater of the seated capacity, additional trips will be provided to bring the load factor below 150% by the next feasible board period.</td>
<td>Where the load factor is 100% or greater of the seated capacity, additional trips will be provided to bring the load factor below 100% by the next feasible board period.</td>
</tr>
</tbody>
</table>
## Service Hours and Frequency

Passengers per revenue hour is a measure of the average number of passengers when a route is in service and is used to evaluate when frequencies should be adjusted. Guelph Transit’s base frequencies are a minimum of every 30 minutes from start of service to 10:00 p.m. Passengers per revenue hour targets are used to evaluate what service frequency should be provided on a route-by-route basis. Guelph Transit’s service hours are generally from 5:45 a.m. to 12:15 a.m. Monday to Saturday and 9:15 a.m. to 6:45 p.m. Sundays and Holidays. Passengers per revenue hour targets for the first and/or last hour of service are used to evaluate when service hours should be provided on a route-by-route basis.

### Frequency Adjustment Targets

#### Peak Periods
- Where the **average passenger per revenue hour is equal to 30 or greater** during a peak period, service frequency should be **increased** by the next feasible board period, with the exception of Community routes.
- Where the **average passenger per revenue hour is less than or equal to 10** during a peak period, service frequency should be **decreased** by the next feasible board period, with the exception of Community routes.

#### Off-Peak Periods
- Where the **average passenger per revenue hour is equal to 22 or greater** during an off-peak period, service frequency should be **increased** by the next feasible board period, with the exception of Community routes.
- Where the **average passenger per revenue hour is less than or equal to 7** during an off-peak period, service frequency should be **decreased** by the next feasible board period, with the exception of Community routes.

### Service Hour Adjustment Targets

- **Increase in service hours**: Where a **minimum of 7 passengers per hour** is achieved for the first or last hour of service, an additional hour of service will be added to the beginning or end of service by the next feasible board period.
- **Decrease in service hours**: Where a **minimum of 5 passengers per hour** is not achieved for the first or last hour of service, an hour of service will be removed from the beginning or end of service or the service will be modified by the next feasible board period, with the exception of Community routes.
On-time Performance Targets

Recovery time is when a route is in service but is not driving or picking up passengers. Recovery time allows for fluctuations in schedule adherence if a route falls behind schedule and provides opportunities to make transfers at hubs. Timing points are stops along a route where the vehicle aims to reach at a scheduled time. These are spaced approximately 5 minutes apart on average. Other stops in between timing points do not have guaranteed scheduled times. Cycle time is the time it takes to drive a route, including layover and recovery time. All base routes are designed to travel at an average operating speed of 23 kilometres per hour. This speed includes when the vehicle is not in motion. All routes are designed to have a targeted recovery time of 10% or 4 minutes of every 30 minutes of cycle time. For example, a 30-minute route would have a recovery time of 3-4 minutes, and a 60-minute route would have a recovery time of 6-8 minutes.

- A bus will arrive at timing points between 30 seconds early to 3 minutes late 85% of the time
- A bus will arrive at timing points between 1 minute early and 5 minutes late 93% of the time.
- A bus will never depart a timing point more than 1 minute early.
- Where these targets are not met, it will be determined if the cause is due to inappropriate cycle times, if timing points need to be adjusted within the existing cycle time, or if it is due to driver error
- Where cycle time or timing points are the issue, the cycle time will be adjusted to reflect reality by the next feasible board period
Service Expansion Targets

Service expansion targets define when service should be implemented in new areas. Where areas are outside a 400 metre walk, an existing route may be extended or a new community route may be implemented to provide service.

**Build-up targets**

- When a density of 22 units per hectare or 50 residents and jobs per hectare is achieved, service will be provided to the area through route extensions or a community route.
- A community route will be converted to a base route when the passenger per revenue hour targets from the Service Hours and Frequency table are achieved.
Service Review Targets

The previous guidelines require that the appropriate data are reviewed at regular intervals.

**Review Timelines**

- Ridership per route will have daily and weekly reports created weekly
- Frequency and service hour targets will be reviewed annually or when a request is made for review, whichever is more frequent
- On-time performance and load factors will have daily and weekly reports created monthly for review

**Financial Performance Reviews**

All financial performance metrics will be reviewed annually and will be compared with comparator Transit Agencies identified in the Transit Business Service Review with the target of being on par with these other agencies. These agencies are Barrie Transit, Brantford Transit, Burlington Transit, Cornwall Transit, GOVA (Greater Sudbury), Kingston Transit, Oakville Transit, St. Catharines Transit, Thunder Bay Transit, and Transit Windsor. The metrics to be evaluated are:

- Cost effectiveness:
  - Operating cost per passenger
- Cost efficiency:
  - Net cost per total vehicle hour
  - Revenue to Cost (R/C) ratio
Highlights/Quick Facts

- Implementation will occur over 10 years (2022-2031)
- Increase from 3 route types to 5 route types
- 30% increase in service
- Number of stops is increased by ~45% due to more bi-directional service
- More Sunday service
- Will service new growth areas such as the Guelph Innovation District, New Operations Campus, and the Clair Maltby Secondary plan area
- All intensification corridors will have frequent transit service
- All community nodes have increased service
Approved Network

This map shows the approved Year 10 (2031) network of the Future Ready Action Plan. Full details and phasing are outlined on the following pages.
Year 1 - 2022

Changes:

• Introduce Route 19 Hanlon Creek with routing options on north loop
• Reinstate conventional Route 16 Southgate
• Cancel Route 40 Scottsdale Express
• Merge Route 50U Stone, 51U Janefield, and Route 57U Ironwood into new Route 50U Scottsdale
• Change Route 56U Colonial service hours to 7:15 a.m. to 9:00 p.m.
• Change Route 58U Edinburgh service hours to 7:20 a.m. to 9:00 p.m.
• Change Route 99 Mainline cycle to 90 minutes, every day, all year long
• Increase Route 99 Mainline frequency to every 9 minutes during peak service hours from September to May
• Extend Route 99 Mainline Sunday service hours
• Reduce Route 99 Mainline evening service frequency to every 15 minutes
Route 1 Edinburgh College

Directions
From University Centre Platform 4:
- Left on South Ring Road
- Left on Gordon Street
- Right on Edinburgh Road South
- Left on Stone Road West
- Right on Scottsdale Drive
